SUMMARY

Software Engineer with hands-on experience in JavaScript, TypeScript, Python, and Java, building and shipping production-grade web applications, AI-powered systems, and analytics platforms. Proficient in code review, debugging complex issues, Git version control workflows (branching, merging, pull requests), and collaborative engineering practices. Experienced in evaluating code quality, maintainability, and adherence to real-world engineering standards. Strong background in LLM integrations, REST APIs, full-stack development, and writing clear technical documentation and feedback.

EDUCATION

B.Tech in Computer Science & Engineering
Presidency University, Bangalore

Dec 2022 – Jun 2026
CGPA: 7.24

Pre-University Course (PUC)
Sree Vijaya PU College, Chintamani

May 2021 – Apr 2022
75.33%

ICSE SSLC
Jyothi English Medium School, Chintamani

May 2019 – Apr 2020
73.17%

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, C++, SQL

Frontend: React, Next.js, Angular, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Flask, REST APIs

Databases: MongoDB, PostgreSQL, SQLite

Version Control & Collaboration: Git, GitHub — branching strategies, pull request reviews, merging, conflict resolution, collaborative workflows

AI & Data: Large Language Models (LLMs), Prompt Engineering, RAG, Data Visualization, Dashboard Analytics

Tools: VS Code, Jira, Postman, TestRail

Spoken Languages: English (Professional), Kannada, Telugu, Hindi

EXPERIENCE

Trainee Associate Software Engineer
Mphasis Limited, Bangalore

Mar 2026 – Jun 2026

- Conducted code reviews and debugging sessions across JavaScript and Python codebases, identifying logic errors, redundant implementations, and performance bottlenecks; refactored modules to improve maintainability and scalability.
- Built and enhanced production-grade Jira analytics dashboards (JavaScript, React) featuring interactive charts, data tables, advanced filtering, search, and PDF export; adhered to team coding standards and engineering best practices throughout.
- Analyzed and debugged complex data categorization workflows — organizing Jira issues by components, metadata, and attributes — to produce accurate business insights and performance metrics.
- Developed and debugged AI-powered Jira chatbot features (Python, LLMs) improving response accuracy, conversational context handling, and follow-up query resolution using prompt engineering and retrieval-augmented generation (RAG).
- Implemented LLM hallucination safeguards via source validation and availability checks, applying systematic debugging techniques to trace and eliminate incorrect model outputs.
- Built document intelligence interfaces (PDF and DOC conversational querying) using Python; debugged data extraction pipelines to improve retrieval accuracy across varied document structures.

- Participated in collaborative Git workflows — branching, code reviews, pull requests, and knowledge transfer sessions — across a cross-functional team delivering enterprise-scale software.
- Contributed to the HiTech Forecast Dashboard: analyzed requirements, attended knowledge transfer sessions, designed implementation workflows, and developed authentication and forecast visualization features.

PROJECTS

CharTier — Community-Driven Character Ranking Platform

[Live](#) [GitHub](#)

- Developed a full-stack production web application (Next.js, TypeScript, Tailwind CSS, MongoDB, Supabase) for rating and tier-ranking fictional characters, with authentication, dynamic ranking logic, and filtering.
- Followed Git branching and versioning best practices; conducted self-reviews to ensure code quality and maintainability before each deployment.

WHO OWNS THIS? — Team Task Ownership Platform

[Live](#) [GitHub](#)

- Built a collaborative web application (Next.js, TypeScript, MongoDB) with team creation, unique join codes, single-owner task assignment, and role-based access control, applying production-grade JavaScript and TypeScript coding standards.

Wispr Flow Clone — Voice-to-Text Desktop Application

[GitHub](#)

- Built a cross-platform desktop application (React, TypeScript, Tauri, Vite) with real-time speech transcription, streaming input handling, and waveform visualization; debugged Tauri-specific runtime issues across platforms.

The Ascent — 2D Platformer Game

[GitHub](#)

- Developed game logic, physics systems, and state management in GDScript (Godot Engine); profiled and debugged performance bottlenecks to maintain smooth frame rates.

ADDITIONAL INFORMATION

- **Availability:** Fully remote, flexible hours — available for freelance/contract work
- **Authorized to work:** India
